TABLE XXV.

SELECTED AGES, WITH SEX,

IN

MINOR CIVIL DIVISIONS

WHERE

THE POPULATION EQUALS OR EXCEEDS THREE THOUSAND,

SHOWING

THE MALES AND FEMALES OF ALL AGES;
THE MALES AND FEMALES OF THE SCHOOL AGE;
THE MALES OF THE MILITARY AND VOTING AGES.

TABLE XXV.

NOTE.—The marginal column marks the civil division into which a county is divided, as township, town, civil or militia district; the first indentation denotes cities, the second villages.

THE TABLES OF OCCUPATIONS.

REMARKS ON THE TABLES OF OCCUPATIONS.

The general Tables of Occupations, Nos. XXVI to XXIX, following, have been duplicated in the publications of the present census, from the consideration that they bear an equally intimate relation to the industrial as to the social capacity and conditions of the people. They will, therefore, be found entire (with the exception of the table known in this volume as XXVII, B) in the volume on the Industry of the United States. The bearing of these statistics on the production of the country will there be discussed. The Superintendent will leave it to others to show their bearing on the social or sanitary condition of the people. The present notes will be confined to such remarks as are necessary to the explanation or vindication of the tables themselves.

THE SCOPE OF THESE TABLES.

The following tables embrace gainful and reputable occupations only. While expressing the employments of more than twelve millions and a half of persons, they do not seek to account for the larger number of those within the same periods of life who have no recognized occupation for which they receive compensation in the shape of wages or salary, or from which they derive products of a merchantable character. All persons, moreover, whose means of livelihood are criminal, or, in the general judgment of mankind, shameful, are excluded.

The reason for excluding gamblers, prostitutes, keepers of brothels, and such persons from the Tables of Occupations, has not been found in any sensitiveness at the mention or recognition of these classes as actually existing in the community, but in the consideration that, from the necessity of the case, the numbers thus reported must be wholly inadequate to the fact, and that a seeming count of them in the census would have the effect to mislead rather than to instruct. Here and there, at the enumeration of the Ninth Census, such persons had the assurance to report themselves by their true designations, or assistant marshals took the responsibility (and in some cases the risk) of writing down the real occupation of members of these classes who had sought to misstate their avocations, or to disguise them under ambiguous terms; but an analysis of the schedules soon made it evident that this had not been done, as indeed was not to be expected, with such uniformity as to secure even approximately correct results. All such titles were therefore dropped. Some, from these classes, may have taken refuge, through false statements, in one or another of the occupations of good repute (notably keepers of brothels as "boarding-house keepers," a euphemism familiar to the compilers of city directories,) but, as a general rule, where the calling was not correctly given, it was wholly withheld; and it may therefore be assumed that substantially the whole body of persons pursuing disreputable and criminal occupations are omitted from these tables. There are no means known to the Superintendent for accurately calculating the number thus excluded or excluding themselves.

The number of those who are not accounted for exceeds, as a matter of course, in a majority of States, the number of those who are returned as pursuing gainful occupations.

The following table exhibits the number of persons in each of the six recognized divisions of the tables, according to age and sex, in comparison with the number of living inhabitants of each such class:

	Aggregate.	Total.		10 to 15.		16 to 59.		60 and over.	
		Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
Number of living inhabitants, (10 years and over)	28, 228, 945	14, 258, 866	13, 970, 079	2, 840, 200	2, 764, 169	10, 429, 150	10, 257, 645	989, 516	948, 265
Number of persons in Occupation Tables	12, 505, 923	10, 669, 635	1, 836, 288	548, 064	191, 100	9, 486, 734	1, 594, 783	634, 837	50, 405
Difference	15, 723, 022	3, 589, 231	12, 133, 791	2, 292, 136	2, 573, 069	942, 416	8, 662, 862	354, 679	897, 860

It will be observed that while the aggregate number of persons in the United States above the age of 10 is 28,288,945, only 12,505,923 are accounted for in the Tables of Occupations. An examination of the several classes

into which this aggregate is divided shows that the omissions are mainly among females, and children below the age of 16 years.

The adult males of the country are as fully accounted for as could be expected. Of 10,429,150 between the ages of 16 and 59 inclusive, 9,486,734 are assigned gainful occupations; while of 989,516 above the age of 60, 634,837 are accounted for. The difference in the former period (*i. e.*, 16 to 59) is substantially made up, first, by the number of students pursuing courses of instruction beyond the age of 16; second, by the number of persons afflicted with permanent bodily or mental infirmities disqualifying them from participating in the industry of the country; third, by the numbers of the criminal and pauper classes. The number of men of this period of life, not disabled, who are not returned as of some specific occupation, by reason of inherited wealth, or of having retired from business, is hardly important enough to be mentioned here. The difference in the latter period (*i. e.*, from 60 upwards) is accounted for by the numbers of persons respectively of the second and third classes just mentioned, and by the, perhaps, larger number of persons retired from active pursuits by reason of an acquired competence, of support secured from grown children, or of advanced age.

Turning to the table of the occupations of females, an analysis of the numbers reported as of specified occupations in the three several periods of life, shows a curious, though probably not significant, rate of progression. In the first period, the females pursuing gainful occupations are to the males as one to three; in the second period as one to six; in the third period as one to twelve.

It would not seem to be difficult to account for the females of each class who are not represented in the Tables of Occupations. The number of female children attending school during the census year, as obtained by the canvass of families (see Remarks on School Attendance, page 448 of this volume,) was 3,180,313. Assuming, as it is probably fair to do, that two-fifths of the female children under 16 who are reported as pursuing gainful occupations, are also embraced in this total of school attendance,* and on the other hand estimating the number of female children of this period of life, belonging to the pauper, vagrant, or criminal class, at 100,000, we shall have something like 500,000 school attendants among the females of the second period of life. Subtracting this from the total number of females between 16 and 59, we shall have in round numbers 9,750,000 persons, of whom only 1,594,783 appear in the Tables of Occupations, leaving, say, 8,150,000 to be accounted for.

As the considerations remaining to be adduced apply equally to females of the third period of life, we may now add their number to the total already obtained, making the aggregate of females above 16 unaccounted for in the neighborhood of 9,100,000.

It would at first appear that a clear deduction should be made of one person on account of each family returned in the census, in all, 7,579,863. This number must be reduced, however, to the extent to which females, the heads of families, and doing all the housekeeping that is done for their families, are also returned as of specific occupations.

No one familiar with factory-towns will doubt that this reduction should be considerable; yet we shall probably reach the truth of the case substantially if we cut down the number to be considered as accounted for as "keeping house" to 7,400,000.† This latter number, then, is to be subtracted from the aggregate, 9,100,000, leaving 1,700,000 as approximately the number of females above 16 who are not accounted for as attending school or as keeping house for their families.

Reason will be shown later in these remarks for believing that females, both women and girls, to the number, probably, of one or two hundred thousand, (it is impossible to reach any assurance in respect to the extent of these omissions,) who do actually take part, more or less, in the (paid) industry of the country, are not embraced in the Tables of Occupations. This further deduction, therefore, has to be made. Taking the mean of the two numbers just indicated, and subtracting it from the number 1,700,000, we shall have 1,550,000 as the remainder, being the number of females above 16 years of age not participating in gainful occupations, nor yet attending school or keeping house.

In the absence of data for calculation and even of reasonable grounds for conjecture, the Superintendent will not

---

* The number of female children embraced in the Tables of Occupations has just been shown to be 191,100. Of these, 73,177 were engaged in agriculture, 1,116 in trade and transportation, 25,664 in manufactures and mining, and 91,143 in personal services, 86,905 of the latter being employed as domestic servants. It is probably within bounds to assume that two-fifths of these were afforded facilities for attending school during some portion of the year.

† It must be remembered that this reduction is upon a total of only 1,645,188, the number of females of 16 years and upward appearing in the Tables of Occupations. Of this number, 323,791 are engaged in agriculture, 17,582 in trade and transportation, 328,286 in manufactures and mining, and 975,529 in rendering personal and professional services. An examination of the numbers reported under each specified occupation will lead to the conclusion that many employments, and these quite the most important, furnish practically no cases whatever of such union of family-housekeeping with paid service elsewhere. The number allowed on account of such duplication, 179,363, appears, from a particular even more than from a general view, to be ample.

attempt to distribute this total among the elements of which it is composed. Whoever will consider the numerous and various classes which appear here, grown daughters living at home, widowed mothers supported by their children, ladies living upon the income of accumulated property, as well as women of the pauper, vagrant, and criminal classes, will be surprised that this number is as small as it is, rather than that it is so large.

DISTRIBUTION BY AGES.

In order to enable such comparisons as the above to be readily made between the total number of inhabitants (male and female) in each period of life, and the number of persons engaged in any or all gainful occupations within that period, certain of the following tables are introduced by statements of the number of males and females of ages, respectively, 10 to 15, 16 to 59, and 60 years and upwards. It needs to be said that, while the class 60 and upwards was obtained by actual count, and while the sum of the two classes 10 to 15 and 16 to 59 was obtained in the same way, the distribution of this total between the two classes has been effected in a degree by calculation and not by count, for the reason that in the compilation of age and sex the "break" occurred at another place, namely, between the years 14 and 15, and not, as chances to be required for the present purpose, between the years 15 and 16. In order, therefore, to the comparison above indicated, the number of persons of each sex who had reached the age of 15 at the date of enumeration, but were still under 16, has been carefully calculated, and the result added to the number known to be from 10 to 14, to make up the class 10 to 15.

THE CLASSIFICATION ADOPTED.

The plan pursued in the compilation of these tables has been to refer every specification of occupation to some grand division of industry; and within each of such grand divisions to constitute as many distinct subdivisions as the nature of the material furnished by the enumerators would allow to be formed with a reasonable approach to completeness, subject, however, to certain conditions which will be presented in the further course of these remarks.

The Superintendent is familiar with the reasons which have induced many European statisticians to abandon the grouping of occupations according to such assumed grand divisions of industry as Agriculture, Manufactures, Trade, &c., and to resort instead to a system of expressing the employments of the people through a large number of minute and precise specifications, susceptible of being combined and recombined successively, according to different ideas or theories of classification; but he is convinced that the conditions and limitations of industrial statistics, at least within the United States, will not allow of such nicety in the treatment of material, and, moreover, that the highest purposes and the largest uses of such statistics require something closely approaching the plan of treatment adopted in the following tables.

The Superintendent is ready to admit the theoretical inferiority of the somewhat "rough-and-ready" classification he has adopted to the scientific precision of the British system; but it is decisive of the question, in his mind, that he has never known the census statistics of occupations resorted to, either in congressional debates or in newspaper or magazine discussions, for any purpose which would not be practically answered by the following tables.

It is perhaps not necessary to pursue the subject, but it may be interesting to note two things in this connection.

First. That the subdivision of labor and the organization of industry in the United States really correspond rather to the classification of occupations adopted in these tables than to the nicer distinctions of the foreign statisticians. Indeed, instead of throwing away valuable discriminations, the difficulty is so to treat the returns as reasonably to fill the classes here given. Whoever will consider the almost utter want of apprenticeship in this country, the facility with which pursuits are taken up and abandoned, and the variety, and, indeed, seeming incongruity of the numerous industrial offices that are frequently united in one person, will appreciate the force of this argument. For example, the distinctions in the profession of the law, which are known and recognized decisively in England and on the Continent, are not maintained in this country except in a few great cities, and there only in exceptional cases. The same person with us is law-scrivener, collector of debts, prosecutor of claims, counselor, attorney, possibly, also, judge. Again, the organization of domestic service in the United States is so crude that no distinction whatever can be successfully maintained. A census of occupations, in which the attempt should be made to reach anything like European completeness in this matter, would result in the return of tens of thousands of "housekeepers" and hundreds of thousands of "cooks," who were simply "maids of all work," being the single servants of the families in which they were employed. Again, the British distinction between the merchant and

the shop-keeper is impossible in this country. If anything whatever could be predicated of the two classes in this respect, it would be that the smaller dealers cling more pertinaciously to the larger title. Still, again, the British "farmer" is wholly unknown with us. The American farmer is, at least in nine hundred and ninety-five cases out of a thousand, the owner of the land he cultivates.

Second. That it is not deemed practicable, in the United States, to secure that the average enumerator shall, in the course of a canvass necessarily hurried, fill two or three thousand subdivisions with appropriate entries without much loss and confusion. As assistant marshals are appointed under the American system, nice discriminations in respect to industrial relations can hardly be maintained in a sufficient proportion of cases to give value to the aggregate results. Of course, accuracy of *definition* is of no value if the *content* be inadequate. It may even be doubted whether the enumerators of any country are capable of carrying out thoroughly any body of instructions respecting the return of occupations, which require more than the plain and simple characterization of each man's employment in the common phrase of the working people themselves. Certainly, it is not to be thought of in the United States.

The employments reported in the census have been, for the purposes of this publication, brought under four general titles, viz, Agriculture, Manufactures and Mining, Trade and Transportation, Personal and Professional Services, the latter having somewhat of a residual relation to the others, and yet in the main a substantial character, and with limits not hard to define.

The reason for making a common title for Trade and Transportation must be sufficiently evident without explanation.

Mining, which stands in idea between agriculture and manufactures, in that, like agriculture, it obtains the raw material of subsequent industrial processes, while, like manufactures, its agencies and forces are chiefly mechanical, not chemical, has, for convenience mainly, been assigned to the group of Manufactures.

A still stronger consideration of convenience, though with somewhat less clear considerations of propriety, induced the Superintendent to place the fishing industry in the category of Manufactures. The number of persons engaged in the fisheries will always and inevitably be below the fact, for the reasons, first, that this industry is usually pursued for a season only, while, for the remainder of the year, the fisherman follows some other gainful avocation under which he will preferably be reported;* second, that no inconsiderable proportion of the persons actually engaged on the water in this pursuit, at the time of the enumeration, having no families to report them are entirely omitted from the census under the American system; third, that where fisheries are carried on in vessels larger than the ordinary row or sail boat, the hands employed are generally known, not as fishermen, but as sailors. The last statement holds true of the vast majority of all persons who are engaged in the whale, cod, and mackerel fisheries. It is true that, according to the theory of a census of occupations taken in the interest of industrial science mainly, vessels so employed should, with all their hands, be excluded from the class of transportation and be returned as engaged in the fisheries; but this distinction is one which it appears hopeless to make, at least in a census of the United States, with the agencies provided by existing laws. We are compelled, therefore, to accept the result that the great majority of persons engaged in the fisheries are returned as sailors merely. The residue are not worth constituting into a separate grand division of industry, and have, therefore, been carried into the manufacturing class, to which, by the way, it may be remarked, though that affords no very good reason, the census-law assigns the fisheries.

THE COMPLETENESS OF THESE TABLES.

Comparison of the numbers reported in the Tables of Occupations with the numbers found under corresponding titles in the Tables of Manufactures, will discover discrepancies of very important extent, which require to be here accounted for, not only in justification of these tables, but for the additional light which such an investigation throws upon the industrial capacity of the country.

Not only do important discrepancies exist, but they are found to be of two kinds, of diametrically opposite direction. In one class of cases the numbers reported in the Tables of Occupations appear to be much too large; in the other, far too small. Two broad reasons are found in the very form of a census taken under existing laws in the United States, one of which explains the first class of discrepancies, while the other covers the ground of the second. As these discrepancies are capital in their extent, they require to be discussed at some length.

* Often, indeed, fishing is carried on at any season of the year only incidentally to some other occupation from which the family derives its principal support.

First, however, it needs to be stated just what constitutes a discrepancy. A failure in the numbers reported in the one place and in the other to balance exactly is not a discrepancy. On the contrary, this is to be expected; and if the numbers are found to be in excess in the proper set of tables, and to be in excess to only the proper extent, this furnishes a statistical proof of a high character. The tables in which the numbers should thus be generally found in excess are the Occupation Tables. The reason for the excess being found in these tables and not in the others is, that the schedule of manufactures gives an *average* return of the number of "hands employed," while the statistics of occupations are taken from a count of individuals upon the population schedule, and present, therefore, a *maximum* return, embracing, as they do, artisans of every class out of employment, temporarily disabled, or for some other reason not included in the actual return of any establishment.

The degree to which such excess should extend will depend, within certain limits, upon the nature of the special occupation, as well as upon the general condition of manufacturing industry throughout the country at the time. It should rarely, however, fall below six per cent. in any trade at any time, and it should quite as rarely go above sixteen per cent.

Whenever, therefore, the numbers returned in the Tables of Occupations do not exceed those under the same titles in the Tables of Manufactures by at least six per cent., and, on the other hand, whenever the former exceed the latter by more than sixteen per cent., there a discrepancy must be admitted.

And, first, of those cases where the numbers in the Tables of Occupations do not exceed those in the Tables of Manufactures by six per cent., or even fall below them.

Instances of this kind are principally confined to the returns of factory-operatives. At the present census these instances are sufficiently marked to require explanation.*

A portion of these omissions, undoubtedly, may be accounted for by the large number (41,619) returned under the head of "Mill and factory operatives not specified," as well as by the number (20,242) of "Employés of manufacturing establishments not specified;" but, in the main, the explanation of the discrepancies is found in the fact, heretofore adverted to, that women and children employed in factories are omitted in large numbers.

Second. Those instances where the numbers appearing in the Tables of Occupations exceed those in the Tables of Manufactures by more than the probable or possible difference between a maximum and an average return. Unlike the class first noted, these discrepancies affect mainly the statistics of those occupations which are pursued singly, or by twos and threes, out of large mills and factories, and even, in a considerable degree, out of shops. Discrepancies of this character in no degree discredit the statistics of occupations. They arise from the fact that the return of "Productive Industry," under the census law of 1850, is not, as indeed it was not intended to be, a complete return of the mechanical production of the country.

The census attempts the enumeration of mechanical industry only as it is carried on in shops, and thus fails to embrace that large body of individual labor which is not attached to distinct "establishments of productive industry." Moreover, the census law establishes a minimum (namely, the value of $500 annually) below which the production of shops shall not be returned: behind which unfortunate exception a host of minor establishments, producing in the neighborhood of $500, take refuge and thus escape enumeration.

The scope of these omissions may be seen in the following table:

---

* At the census of 1860, the discrepancies of this kind were still more numerous and far more extensive. A single example will suffice The Tables of Occupations characterize but a little over two thousand persons as connected with the woolen and worsted manufactures, while the Tables of Manufactures show that considerably more than forty thousand persons were engaged, upon the average, in these branches of manufacturing industry.

The effect of this wholesale omission of the production of certain trades upon the aggregate value of manufacturing and mechanical products in the country has been discussed in the volume on Industry.

Inasmuch as it is not the Tables of Occupations which suffer from the comparison, it will not be necessary to pursue inquiry further into this class of discrepancies in the present connection. The Tables of Occupations are incontestably accurate, in a high degree, in respect to these common trades.

AN EXCEPTION.

In making such comparisons as the foregoing, between the Tables of Occupations and those of Manufactures, care should be used that the titles taken for the purpose really correspond. In some cases, even those in which the apparent correspondence is the strongest, the quantities are in fact not commensurable. An example may be found in the brick and tile manufacture. It would seem, at first glance, that the "hands employed" should answer exactly to the "brick and tile makers" in the Tables of Occupations; but, in fact, a considerable portion of the

hands employed in large brick-yards, exceeding, indeed, not infrequently, the number of craftsmen, are classed and known as common laborers, and are so returned in the census. The following comparison of the number of brick and tile makers appearing in the Tables of Occupations, with the number of hands employed in establishments producing bricks and tiles, will show the scope of this exception. It will be seen that while in two or three minor cases the number returned on the Tables of Occupations, exceeds, as we are accustomed to expect, the number in the Tables of Manufactures, the proportion of common laborers employed in brick-yards where that branch of manufacture becomes considerable, (notably in the larger manufacturing States,) is so great as to raise the numbers in the latter tables considerably above those in the former.

INCOMPLETE SUBDIVISION OF EMPLOYMENTS.

In addition to the apparent deficiencies or discrepancies which have been noted, one general remark will suffice in explanation of many of the entries in the following tables, in respect to the accuracy of which question may naturally arise.

It must be borne in mind that the number of persons who are reported under a certain specified occupation does not necessarily embrace all the persons who perform the duties usually associated with that title, but only those who discharge such duties to the exclusion of other gainful occupations, or, at least, as their principal or sole professed means of support.

The organization of labor and the subdivision of industry vary in respect to completeness and minuteness with each successive community. As communities advance in industrial character, functions become separated, and distinct occupations become recognized. This country, from its peculiar conditions, presents almost every degree between the two extremes of industrial development in this particular. It is common to find on the returns from the present Territories, and even some of the present States of the Union, such entries as these: "Carpenter and miner," "Blacksmith and carpenter," "Blacksmith and miner." In many of the communities of the land it is difficult to draw distinctions much finer than those between the agricultural, the mining, the mechanical, and the commercial pursuit or profession. Indeed, even this is not always practicable, since it is matter of notoriety that in many of the States of the Union, and those not among the newest, the occupations of carpenter and farmer, or blacksmith and farmer, or farmer and fisherman, are frequently united in one person. In large and more prosperous communities a clear separation between such incongruous occupations takes place; yet, still, the carpenter, for instance, in nine out of ten counties in the United States, performs half a dozen functions which, in cities, are recognized as belonging to distinct trades.

The same general process which has been indicated in manufactures, occurs in the subdivision of employments known as agricultural, commercial, and professional.

Thus, the tables following show 100,406 traders and dealers whose branch of trade is not specified, while there are also reported 1,939 persons as dealing in agricultural implements; 3,392 in books and stationery; 7,019 in boots and shoes; 4,087 in cabinet-ware; 8,234 in cigars and tobacco; 7,595 in clothing; 1,163 in cloths and textile fabrics;

4,143 in coal; 2,493 in coal and wood; 1,701 in cotton; 1,765 in crockery, china, and stone ware; 17,369 in drugs and medicines; 39,790 in dry-goods; 6,402 in gold and silver ware and jewelry; 74,410 in groceries; 3,375 in hats and caps; 1,464 in ice; 9,003 in iron, tin, and copper wares; 2,261 in leather, hides, and skins; 310 in lime; 11,718 in liquors and wines; 7,723 in live stock; 9,440 in lumber; 254 in machinery; 848 in music and musical instruments; 1,455 in newspapers and periodicals; 986 in oils, paints, and turpentine; 301 in optical instruments; 11,809 in produce; 7,528 in provisions; 8,933 in real estate; and 3,152 in sewing-machines.

The want of specifications in the case of the 100,406 first mentioned, is not due to the neglect of assistant marshals, but to the fact that these persons so characterized are actually selling agricultural implements, books and stationery, boots and shoes, &c., &c., through pretty much the entire line of articles sold by those other dealers whose departments are defined because the communities in which they dwell and deal are sufficiently large to allow of the subdivision of trade.

If, therefore, we look at those occupations which emerge as distinct employments only in communities where the organization of industry and the sub-division of labor are carried to a high degree, the number of persons engaged will appear to be impossibly small, unless the above considerations are borne carefully in mind.

ANOMALOUS ENTRIES.

Other seeming discrepancies, which demand at least an allusion here, occur where persons are returned as of certain special occupations in States where it is notorious that the industries represented are not carried on; or, again, where persons, not more than one, two, or five in number, are returned in a State under a description which implies a large body of workmen, as (in illustration of both these classes) when Ohio is returned as having one silk-mill operative, it being difficult to see how one operative could justify a silk-factory in Ohio, and it being, moreover, notorious, as matter of fact, that the manufacture of silk is not carried on in that State. An adequate explanation of all cases of this general nature is found in the consideration that the census takes account of persons where they are actually residing, and assigns them to their habitual occupation, whether it is being at the time pursued or not.

In the enumeration of tens of thousands of persons out of health, or out of employment, traveling, or visiting friends in other States, it is inevitable that such apparent anomalies should arise.

Nota Bene.—Each employment specified in the following tables must be understood in connection with the class or grand division of industry under which it is placed. To many, and, indeed, most of the specifications of occupation, this warning, in the nature of the case, does not apply.

Others, however, will be misinterpreted without a reference to the more general title. Thus, "clerks and copyists" appear under the head "personal and professional services," to the number of 6,138. These are clerks to lawyers, clerks to civil engineers, copyists not attached to commercial houses or manufacturing establishments, &c. "Clerks" also appear under the head of "Manufactures and Mining," so far as persons are employed in a purely clerical capacity in those branches of industry; while, under the title of "Trade and Transportation," "clerks" appear several times as "clerks in stores," "clerks in banks," "clerks in railroad-offices," &c. In such cases, "cross-references" will generally be found between the several parts of the tables where these entries occur.

TABLE XXX.

THE NUMBER OF PERSONS IN EACH STATE AND TERRITORY

ENGAGED IN EACH SELECTED OCCUPATION

AND

CLASS OF OCCUPATIONS,

WITH

DISTINCTIONS OF AGE AND SEX AND OF NATIVITY.

NOTE.—For the purposes of Tables XXX and XXXII following, certain specific occupations, seventy-four in number, have been selected, consideration being had, at once, of the importance of each individual occupation arising from the number of persons engaged therein, as in the case of blacksmiths, domestic servants, carpenters, cotton-mill operatives, and agricultural laborers, and of the claim of the occupation to attention, arising from the character of the duties belonging thereto, as in the case of clergymen, lawyers, physicians, &c. The smaller and less important of the specific occupations have, for the sake of brevity, been omitted from these tables. The lines for "Agriculture," for "Professional and Personal Services," for "Trade and Transportation," and for "Manufactures and Mining," are, however, complete, including all the occupations of their respective classes, whether here enumerated or not. The line for "All Occupations" gives the sum of these four classes. It follows that the occupations specified under each class do not make up the total of the class, nor do all the occupations specified make up the total of "All Occupations."

In the same way, as certain nationalities only are reported in this table, the sum of the numbers given under all the heads of nationality specified is not to be expected to agree with the total number of persons reported as engaged in each occupation, or in all occupations.

TABLE XXX.—STATE OF ALABAMA.
